PROFESSIONAL SUMMARY

Results-driven Full-Stack & Software Developer with a strong academic foundation in Computer Science and hands-on experience delivering computer vision, voice automation, and API-driven systems. Proficient in Java, Python, JavaScript, SQL, and RESTful API architectures. Proven record of eliminating manual workflows through end-to-end automation, including designing an automated facial-recognition system that eradicated 100% of manual roll calls and reduced tracking time by over 95%. Solid background in DSA, DBMS, Operating Systems, Computer Networks, and QA testing standards.

TECHNICAL SKILLS

Languages: Java, Python, C, JavaScript (ES6+), SQL, Bash
Backend & Web: RESTful APIs, Node.js, Spring Boot, HTML5, CSS3, DOM Manipulation, JSON Integration
Databases: MySQL, SQLite, Relational Database Management Systems (RDBMS), Query Optimization
Libraries & APIs: OpenCV, Face Recognition, OpenAI API, Google Gemini AI, Spotify API, pyttsx3, SpeechRecognition
Developer Tools: Git, GitHub, VS Code, Postman, Jira, Linux / Ubuntu, MS Excel
Core Concepts: Data Structures & Algorithms (DSA), OOP, SDLC, QA Testing, Test Automation, System Optimization

TECHNICAL PROJECTS

FRIDAY — AI-Powered Personal Voice Assistant Jan 2025 – Present
Python, OpenAI API, Gemini AI, Spotify API, pyttsx3, SpeechRecognition, psutil | github.com/sr-exe/Friday_male

- Modular API Integration:** Engineered a bilingual (Hindi/English) voice agent integrating OpenAI, Google Gemini, and Spotify Web APIs, supporting 50+ automated voice commands and reducing task execution duration by 70%.
- Latency Reduction & State Handling:** Optimized neural TTS voice pipelines and configured local JSON caching, slashing system response latency by 40%.
- Fault-Tolerant Offline Fallback:** Architected offline fallback logic via local Wikipedia query caching, sustaining 100% core capability uptime during network outages.
- Code Generation Engine:** Implemented voice-to-code synthesis creating executable Python scripts from natural language prompts in under 5 seconds.
- Version Control & Maintenance:** Managed codebase across 30+ version-controlled Git commits with modular error handling and structured routines.

BIOMARK — Smart Facial Recognition Attendance System Aug 2024 – Dec 2024
Python, OpenCV, Face Recognition, SQLite, Pandas, Excel Automation | github.com/sr-exe

- Computer Vision Pipeline:** Developed automated facial-recognition tracking using OpenCV, replacing manual roll calls and reducing attendance time from ~5 minutes to under 10 seconds per session.
- Anti-Spoofing & Geofencing:** Implemented GPS coordinate validation and liveness verification, preventing proxy attendance and maintaining 100% record integrity across 100+ students.
- Automated Data Pipelines:** Integrated automated Excel/CSV export scripts, saving administrative staff 2 to 3 manual recording hours weekly.
- Database Schema & Performance:** Built optimized SQLite relational tables to query daily logs, user profiles, and historical records with sub-second lookups.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science & Engineering 2024 – Present
Direct Second Year Entry • Maharashtra, India Expected Graduation: 2027

Diploma in Computer Technology 2021 – 2024
Maharashtra State Board of Technical Education • Maharashtra, India Aggregate: 83.60%

RELEVANT COURSEWORK

Data Structures & Algorithms (DSA) • Design & Analysis of Algorithms • Database Management Systems (DBMS) • Computer Networks • Operating Systems • Software Engineering • Object-Oriented Programming (OOP) with Java

LANGUAGES & INTERESTS

Languages: English (Proficient / Professional Working), Hindi (Native), Marathi (Native)
Domain Focus: Full-Stack Development, Software Testing (QA), Test Automation, AI/ML Integrations, Cybersecurity
